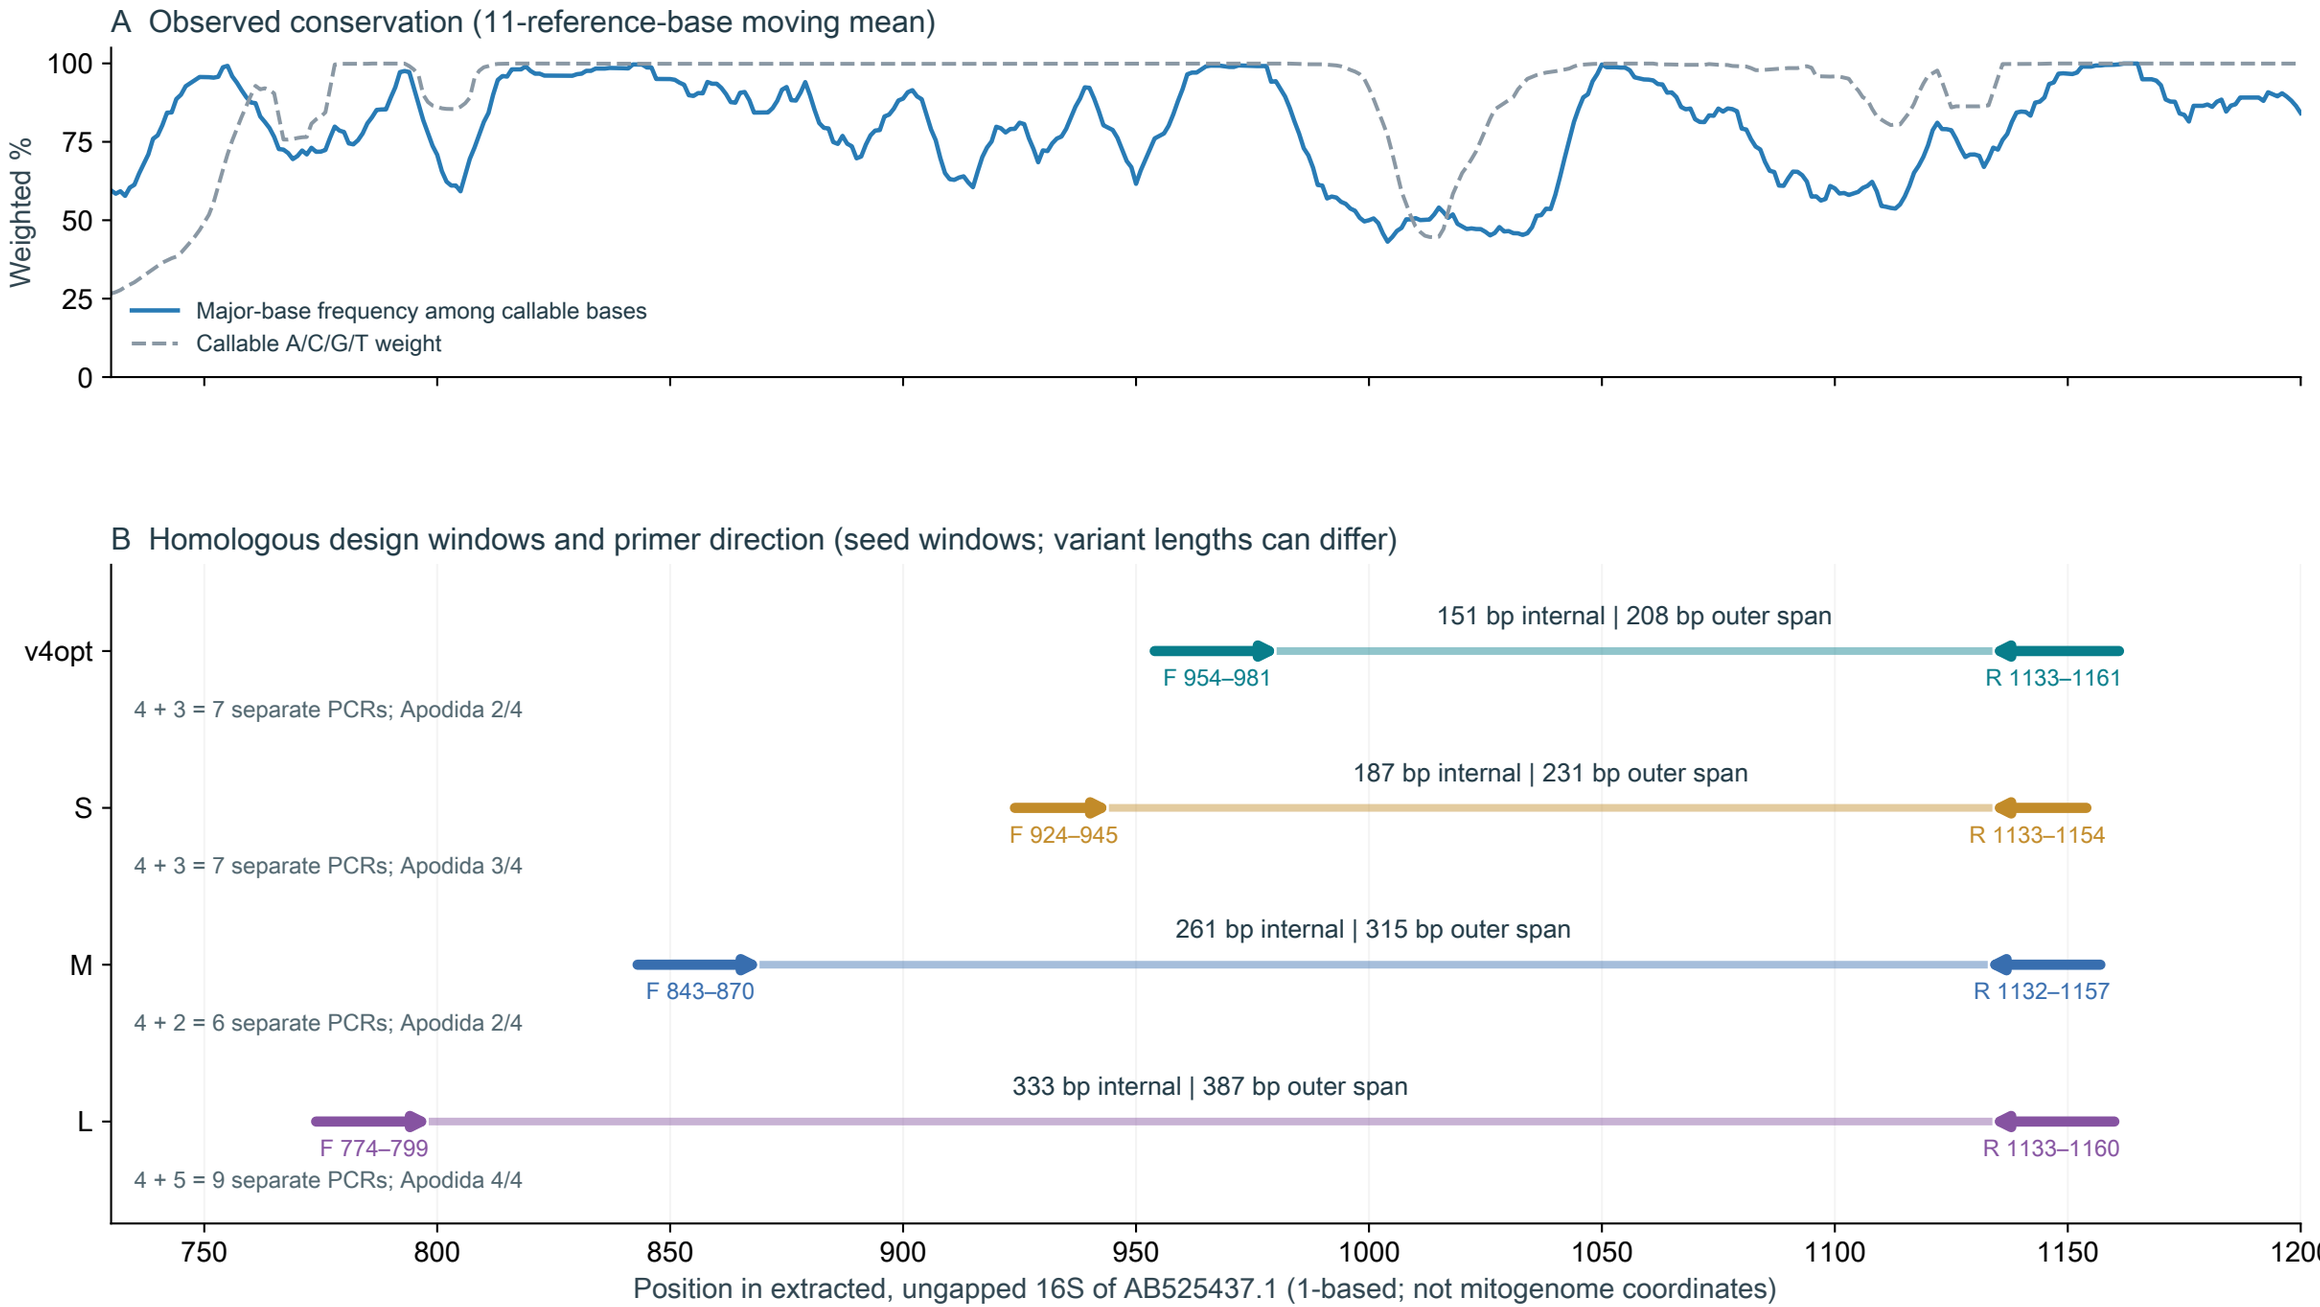
MiCucumber amplicon regions and same-locus supplementation

Common panel: 149 name labels / 347 haplotypes | Reference: Apostichopus japonicus AB525437.1



Spans describe reference design windows, not actual product lengths in every taxon. Added Apodida pairs use homologous windows and separate PCRs.
Conservation excludes gaps/ambiguous bases; the dashed curve shows callable weight. Only four Apodida records are in this panel; 4/4 is not order-wide coverage.
